CS-Studio & Phoebus Status Report

Wednesday 5 June 2019 16:00 (20 minutes)

An update on the latest developments in control system studio and phoebus.

CS-Studio 4.6 is scheduled for release May 2019, the highlights of this release include the migration to openjdk11 and javafx.

Phoebus is a replacement for the eclipse RCP framework for cs-studio applications and services. The framework uses core java functionality with javafx to provide a reliable, performant, and thinner alternative to eclipse and SWT.

In order to ease the migration from eclipse to phoebus the cs-studio 4.6 release includes phoebus integration plugins with functionality needed to support a smooth transition.
