ITER Operation Applications: Status and Future Development

Wednesday 21 September 2022 12:10 (20 minutes)

As ITER construction continues, the importance of high-level applications for integrated control and monitoring increases. ITER Operation Applications are being developed to address these needs. The Pulse Schedule Preparation System (PSPS) and Supervisory System (SUP) combine to provide coordinated, well-controlled and yet flexible solutions for configuration and operation of all plant systems at ITER. This talk will provide an update on the current development status of these systems.
