# Startup script for an EPICS Edge server for small laboratory experiments

*Friday 23 September 2022 09:00 (5 minutes)*

We present a simple Python-based startup script for setting up an EPICS Edge server for small laboratory experiments.

For easy and fast setup of EPICS hardware for lab experiments we have developed a script that sets EPICS Base, all necessary support modules as well as our institutes own environment variables. For this purpose Base and the modules are further built from the current sources.
