
Summer Pre- Physics PhD Enrichment

Assistant Professor Chris Palmer (he/his)

Distinguished Professor Jim Gates

P³ Scholar Chris Sherald

What's the idea?/Why am I here?

- This program was designed for Pathway to Physics PhD (P³) scholars to ensure their academic success and get them on-boarded with the Laboratory for Physical Science (LPS).
 - The physics department allowed us to offer this opportunity to other incoming students as well.
 - This five-week program will include:
 - Daily math exercises from 9:30AM to 4:30 or 5PM with breaks and lunch breaks
 - Team building activities
 - Tips for getting ready and being successful for the upcoming graduate program
 - Building this group as a cohort: we want you to collectively be a support system for each other throughout the year (and beyond?).
-

Who are we?

Name

Position

Goals for the next five weeks

P³ Scholar Chris Sherald

Assistant Professor Chris Palmer (he/his)

Distinguished Professor Jim Gates

Who are you?

Name

How you found your way here?

Goals for the next five weeks

Anything specific you want to learn

How is this going to work?

Jim and Chris² are going to tee up some concepts (as briefly as possible).

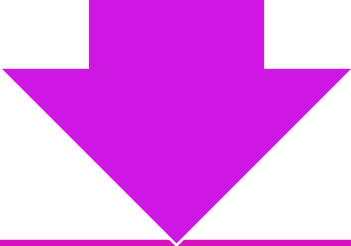

You all are going to work in small groups on a LOT of problems.

Usually you'll take a second to think about the strategy on your own.

Pair up with someone to work through it.

Groups will rotate giving the solution on the board.

If there are multiply ways to do the problem, we might get more than one group to show it.

The object is to show you that YOU are each others' most important resources and to leave NO ONE behind.

Proposed Community Agreements

1. Share talk time
2. Listen actively
3. Value differences and respect everyone's expertise
4. Be present
5. Stories stay, lessons leave
6. Create an inclusive, collegial, and respectful environment
7. If you see something, say something
8. Have fun!
9. Check in when someone seems disconnected.
10. Everyone can/should ask "dumb" questions.
11. Everyone needs to be patient (including the facilitators!).

- *What would it mean to act on these agreements?*
- *What behaviours should we avoid?*
- *Are there any missing?*
- *If there are any missing, please write it down and be prepared to share it out.*

What sort of problems?

Process

- Start with the math as a tool.
- Apply in a physics scenario.

Envisioned curriculum

- Weeks 1&2: vector analysis and vector calculus with applications in E&M and classical mechanics
- Week 3: ordinary differential equations (ODEs) followed by partial differential equations (PDEs)
- Week 4: complex variables and linear algebra
- Week 5: series analysis

WHAT ELSE?!

- We aren't giving you homework, but this week we need to know what you want to have reinforced.
 - Are there any particular topics/problems that you found mysterious or that were skipped?
 - Let us know THIS WEEK, so we can include it.
-

Course agenda

Still a work in progress, but materials will ultimately be posted here.

<https://indico.cern.ch/event/1304107/timetable/?view=standard>

The screenshot displays the agenda for the Summer Pre-Physics PhD Math Enrichment Program (2023) on Monday, 10 July. The program runs from 09:00 to 16:00 US/Eastern at Toll 1120 (UMD). The agenda is as follows:

- 09:30 - 17:00 Day 1: Orientation**
Convener: Chris Palmer (University of Maryland (US))
- 09:30 Introduction**
Overview / goals from Chris P
Welcome video from Jim Gates
Participant introductions
Participant goals
Speaker: Chris Palmer (University of Maryland (US))
- 10:50 Calculus Concept Inventory**
- 11:20 Geometry and Trig**
Law of cosines, sines
Using vectors
- 12:00 Lunch**
- 13:00 Content: TBD**
Review CCI problems as needed
Tutorial on 1st and 2nd derivatives (if needed)
Selected exercise on vector analysis; Arfken 1.2-1.5 (if time allows)
RepresentationOML
- 15:30 STEM Library Tour**
- 16:00 Campus Tour**

What now?

Calculus concept inventory

The background features several handwritten mathematical derivations in white chalk on a dark surface. The most prominent derivation is the calculation of the derivative of $f(x) = x^2$ using the limit definition. It starts with the general formula $f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$, then substitutes $f(x) = x^2$ to get $f'(x) = \lim_{h \rightarrow 0} \frac{(x+h)^2 - x^2}{h}$. This is expanded to $\lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - x^2}{h}$, which simplifies to $\lim_{h \rightarrow 0} \frac{2xh + h^2}{h}$. Other visible derivations include the derivative of $f(x) = \sqrt{x}$, showing $f'(x) = \lim_{h \rightarrow 0} \frac{\sqrt{x+h} - \sqrt{x}}{h}$ and the final result $\frac{1}{2\sqrt{x}}$. There are also some scribbles and other formulas like $y = g(x)$ and $f'(a) = \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$.

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$
$$f'(x) = \lim_{h \rightarrow 0} \frac{(x+h)^2 - x^2}{h}$$
$$= \lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - x^2}{h}$$
$$= \lim_{h \rightarrow 0} \frac{2xh + h^2}{h}$$
$$f'(x) = \lim_{h \rightarrow 0} \frac{\sqrt{x+h} - \sqrt{x}}{h} = \frac{1}{2\sqrt{x}}$$
$$f'(a) = \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$$
