

Further ideas: IYQ events 2025

Igle Gledhill 20250109

1. From Silvana: Quantum Science and Technology is a truly multidisciplinary field. Its community comprises physicists, mathematicians, chemists, material scientists, computer scientists, informatics engineers, software engineers, electrical engineers, telecom engineers, chemical engineers, even medics, etc. This should also be reflected in the global events. That's crucial, for the quality of the event and for its inclusivity.
2. We can organise IUPAP events with partners without going through the Steering Committee.
3. Therefore, some examples:
4. QST for Health: partner with IUPAC (Chemistry), IUBS (Biological Sciences), IUPAB (Biophysics), IUPESM (Physical and Engineering Sciences in Medicine), IOMP (Medical Physics)
5. QST for the health of the planet: partner with IUGG (Geodesy and Geophysics), IAGA (Geomagnetism and Aeronomy), COSPAR (space Research), IPO (Polar organisation), ask IPCC for more references
