

# RESULTS FROM THE TELESCOPE ARRAY

ISVHECRI<sup>20</sup>  
Puerto Vallarta, México 8 -12 July <sup>24</sup>

John Matthews - University of Utah  
Telescope Array Collaboration

8 July 2024

# OUTLINE

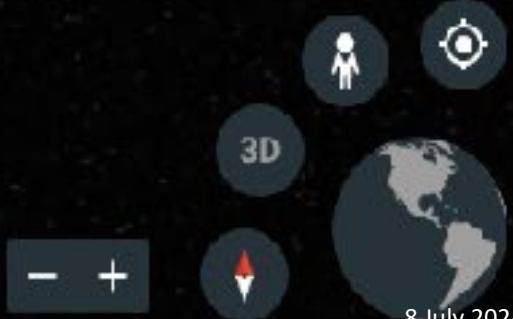

- Introduction
- Main Topics in UHECR
  - Energy Spectrum and Features
  - Anisotropy and Sources
  - Chemical Composition
- Conclusions

# TELESCOPE ARRAY: THE LARGEST COSMIC RAY OBSERVATORY IN THE NORTHERN HEMISPHERE

**YOU ARE HERE**  
Puerto Vallarta, MX  
20° N, 105° W 15m a.s.l

**Telescope Array**  
Delta, Utah, USA. ~ 39° N, 113° W 1400m a.s.l.  
Collaborators from HiRes, AGASA joined by other institutes

# TELESCOPE ARRAY

## Telescope Array Detectors

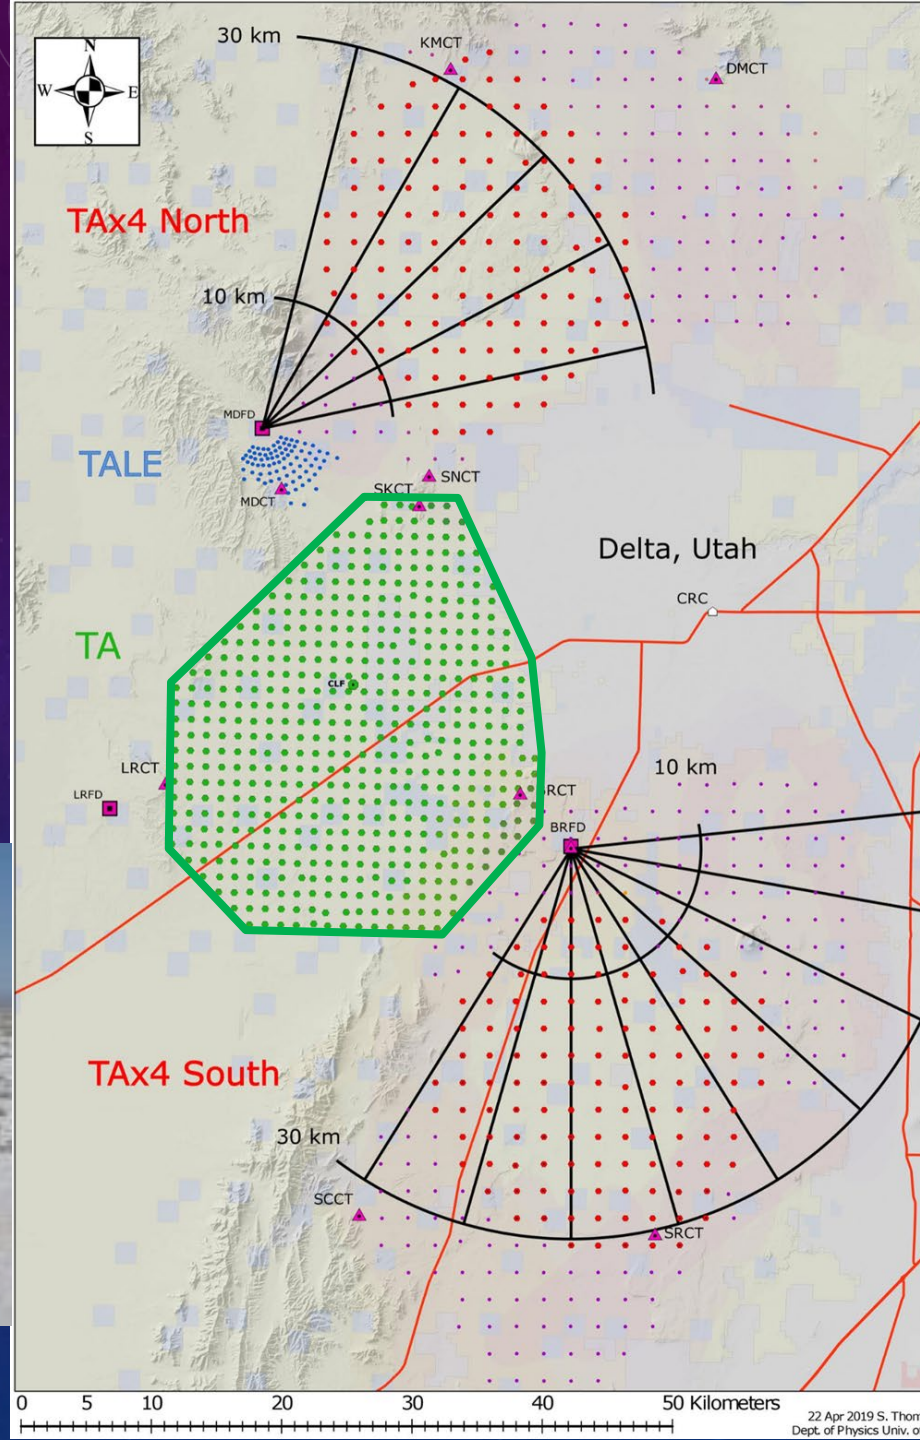

### Surface Detector Array (3/2008)

- 507 Scintillator Counters
- 3 m<sup>2</sup> area
- 1.2 km spacing
- ~700 km<sup>2</sup>

### Fluorescence Telescopes (2007)

- 3 Stations
- 12–14 Telescopes ea
- 3°–31° elevation
- Above SD Array

### Scintillator Detector

### Middle Drum

### Black Rock Mesa

# TELESCOPES

- Segmented mirrors
- 256 hexagonal PMTs/camera
- pixel views  $\sim 1^\circ$  of sky
- UV band-pass filter

# SCINTILLATOR SURFACE DETECTORS

- 2 layers scintillator
- 1.25 cm thick, 3m<sup>2</sup> area
- WS Optical fibers to PMTs

# Scintillator Detectors on a 1.2 km square grid

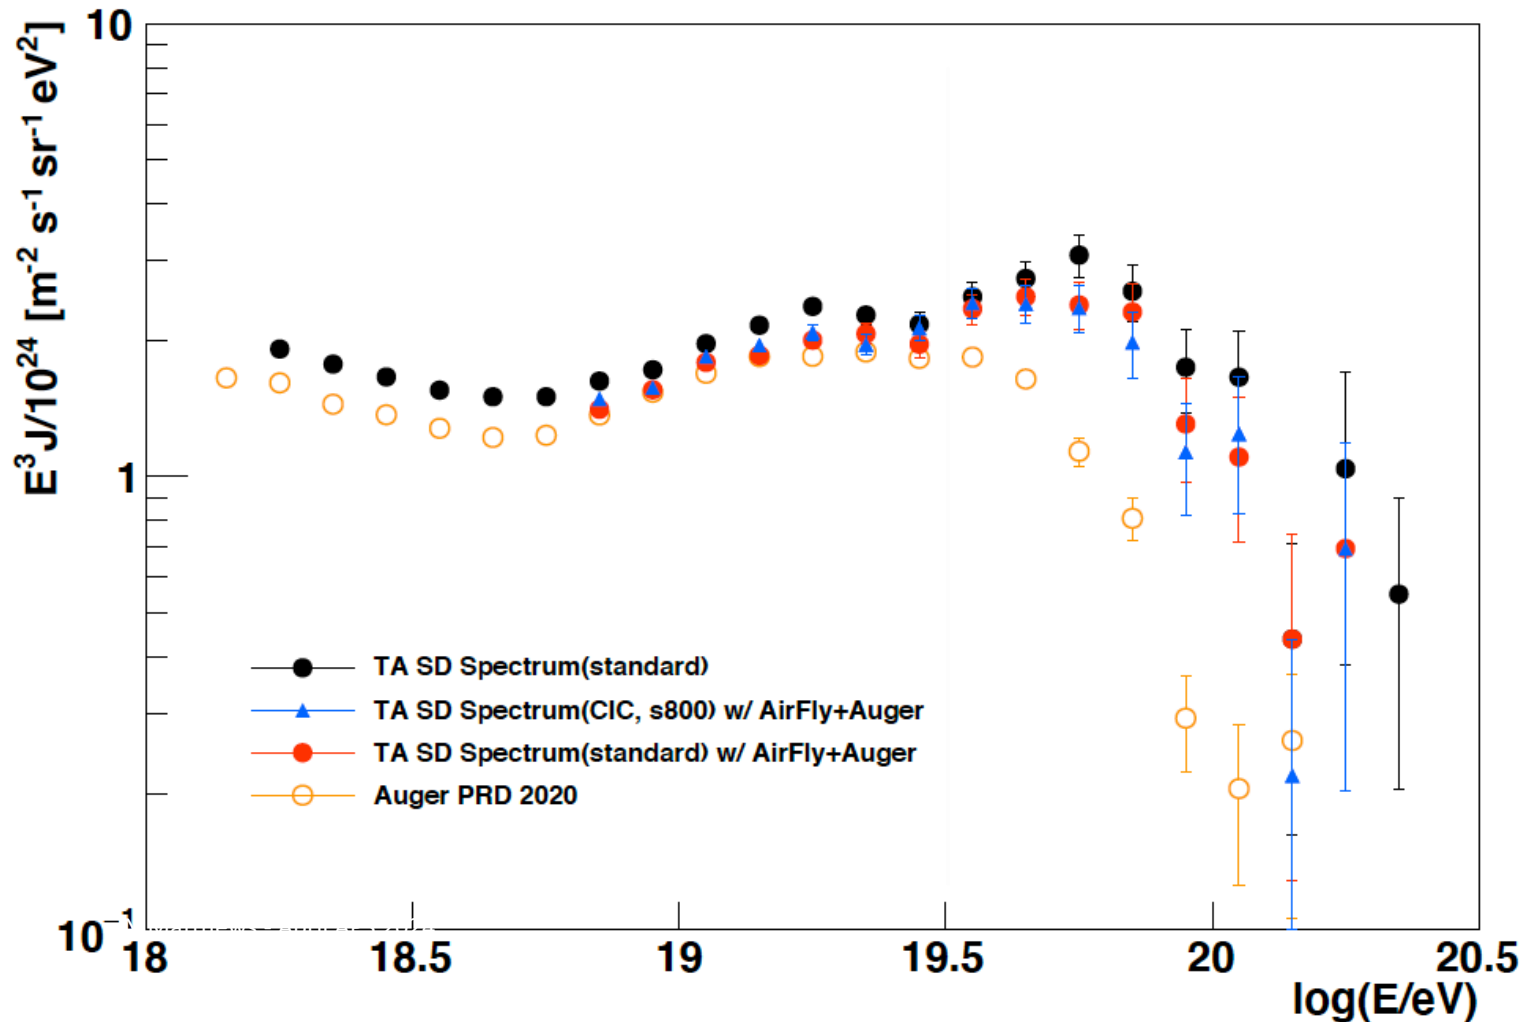

- Power: Solar/Battery
- Readout: Radio
- Self-calibrated:  $\mu$

# TELESCOPE ARRAY WITH AIRFLY YIELD & AUGER MISSING ENERGY

TA SD Spectra

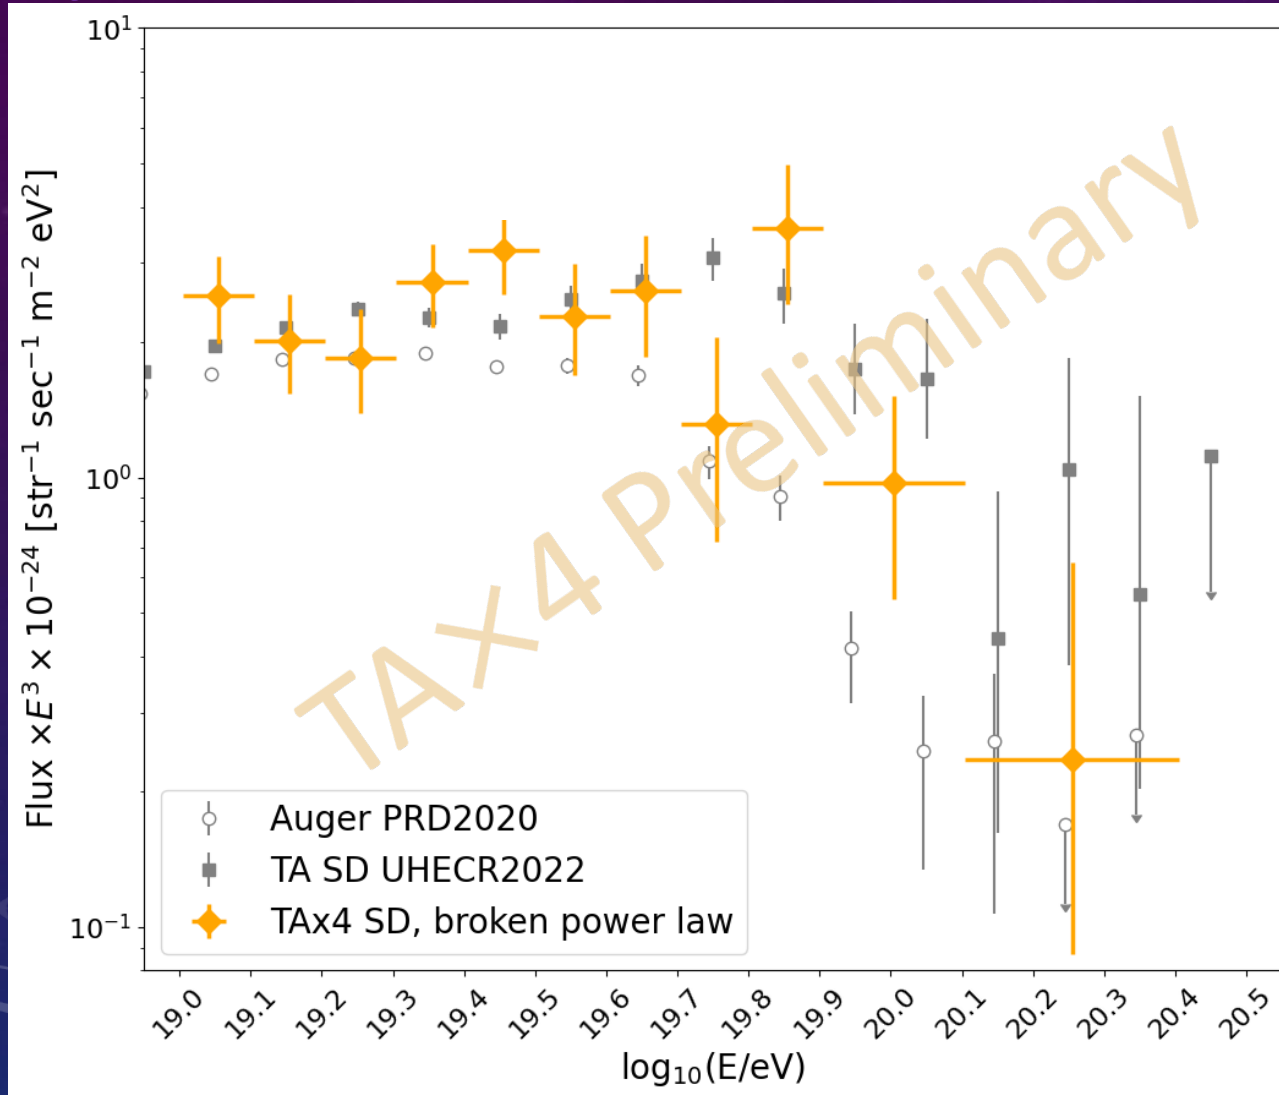

- **Before:** difference between Telescope Array and Auger Spectra was  $\sim 9\%$ , well within the uncertainty of either experiment
- **After** modifying Telescope Array to use AirFly fluorescence yield and Auger missing energy correction, agree  $\sim 1\%$ , for  $E < 10^{19.5} \text{ eV}$

# TAx4 SD ENERGY SPECTRUM

K. Fujisue

- The energy spectrum was measured by the TAx4 SD using data (3 years: Oct. 2019–Sep. 2022).
- Limited statistics in TAx4 SD start-up due to the absence of the inter-tower trigger system in this period.
- Consistent with the energy spectrum measured by the TA SD array.

The red line is the same fit function.

# FITTING BOTH SPECTRA IN THEIR FULL APERTURES: $8.0\sigma$ DIFFERENCE

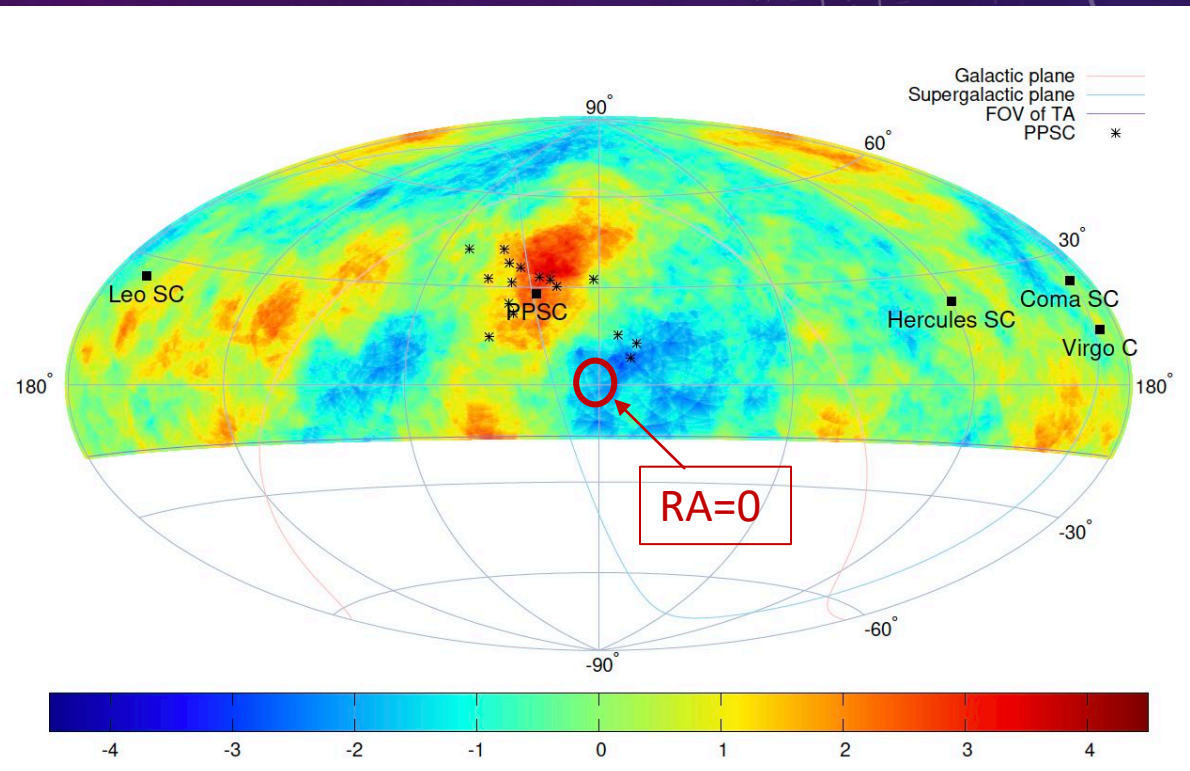

# DECLINATION DEPENDENCE IN THE TA SD SPECTRUM

- Differences in the cutoff energies
  - $\log(E/\text{eV}) = 19.84 \pm 0.02$  for higher declination ( $24.8^\circ - 90^\circ$ )
  - $\log(E/\text{eV}) = 19.65 \pm 0.03$  for lower declination ( $-16^\circ - 24.8^\circ$ )
- The local significance is  $4.8\sigma$ .
- The global significance of the difference is estimated to be  $4.4\sigma$ .
- No instrumental causes were found.

# ANISOTROPY SIGNAL/EXCESS REGIONS IN TELESCOPE ARRAY DATA (14 YRS)

J.H.Kim

## TA Hotspot

$E > 10^{19.75}$  eV

$3.2\sigma$  post-trial

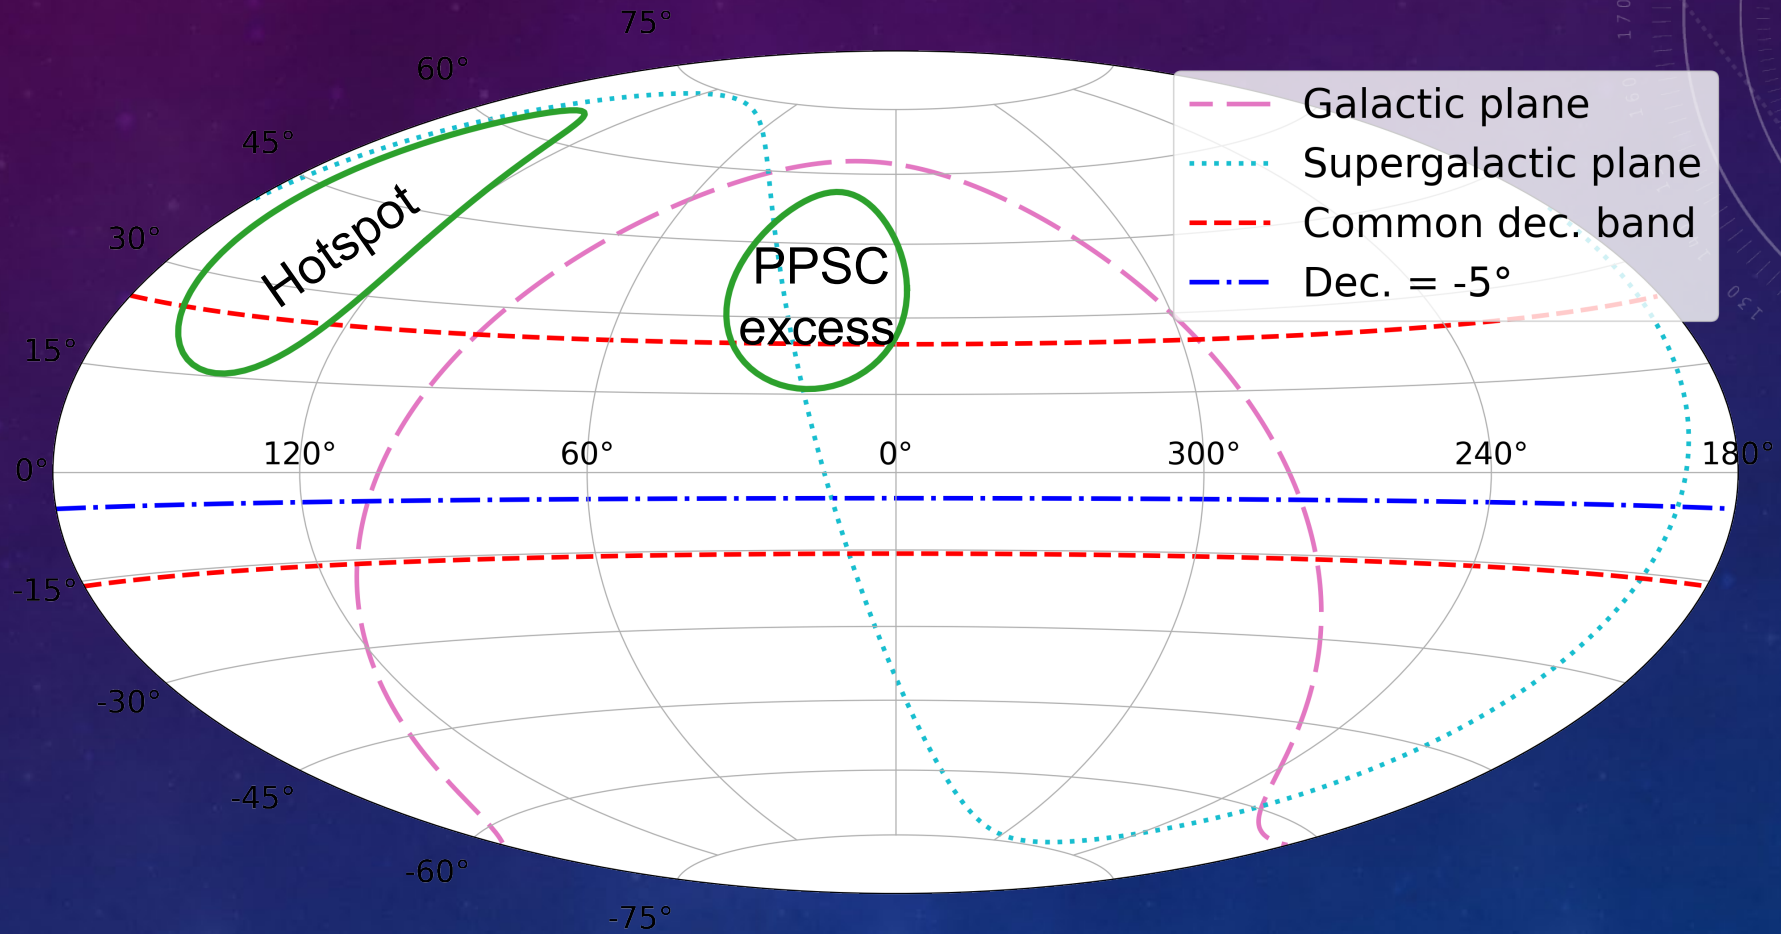

(brightness not sustained recently)

## Perseus-Pisces SC

$E > 10^{19.4}$  eV

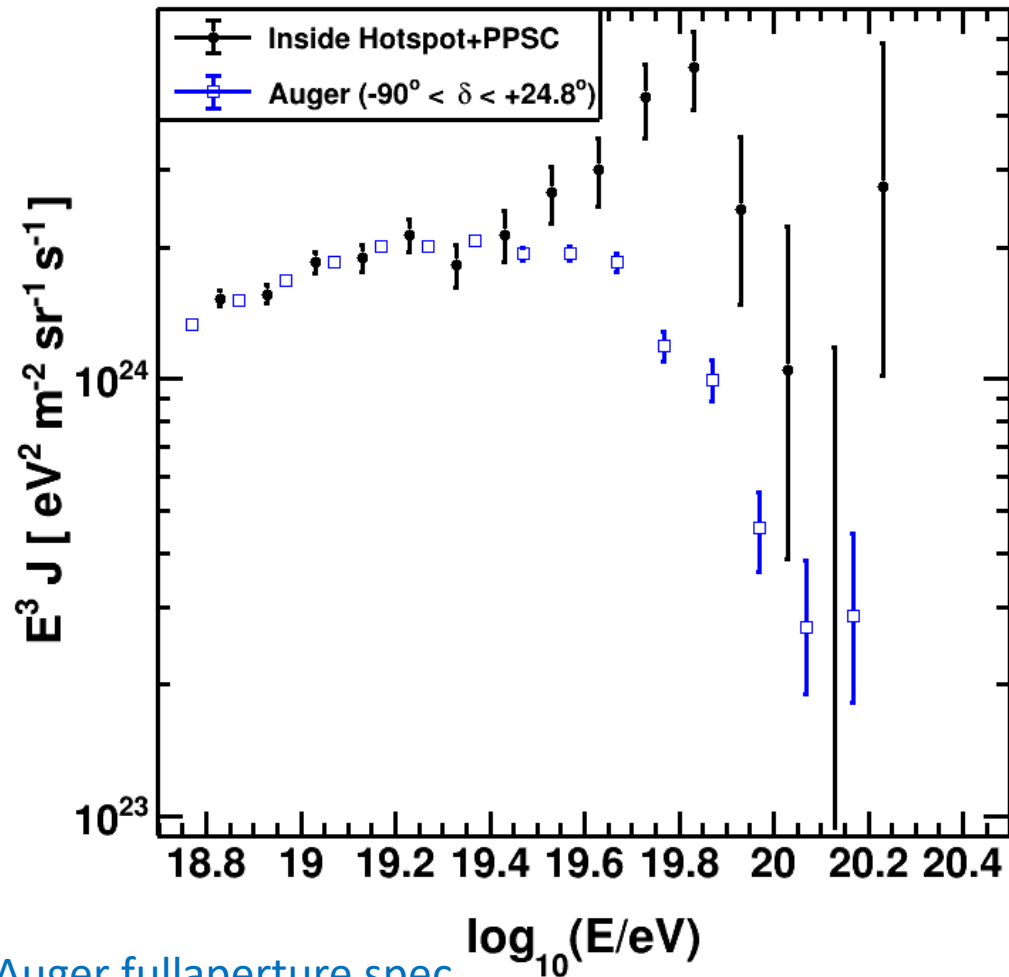

$4.0\sigma$  local

# FIGURE 4: SKY MAP IN EQUATORIAL COORDINATES

# TA INSIDE/OUTSIDE HOTSPOT+PPSC

## Telescope Array INSIDE the Excesses

Auger fullaperture spec

## Telescope Array OUTSIDE the Excesses

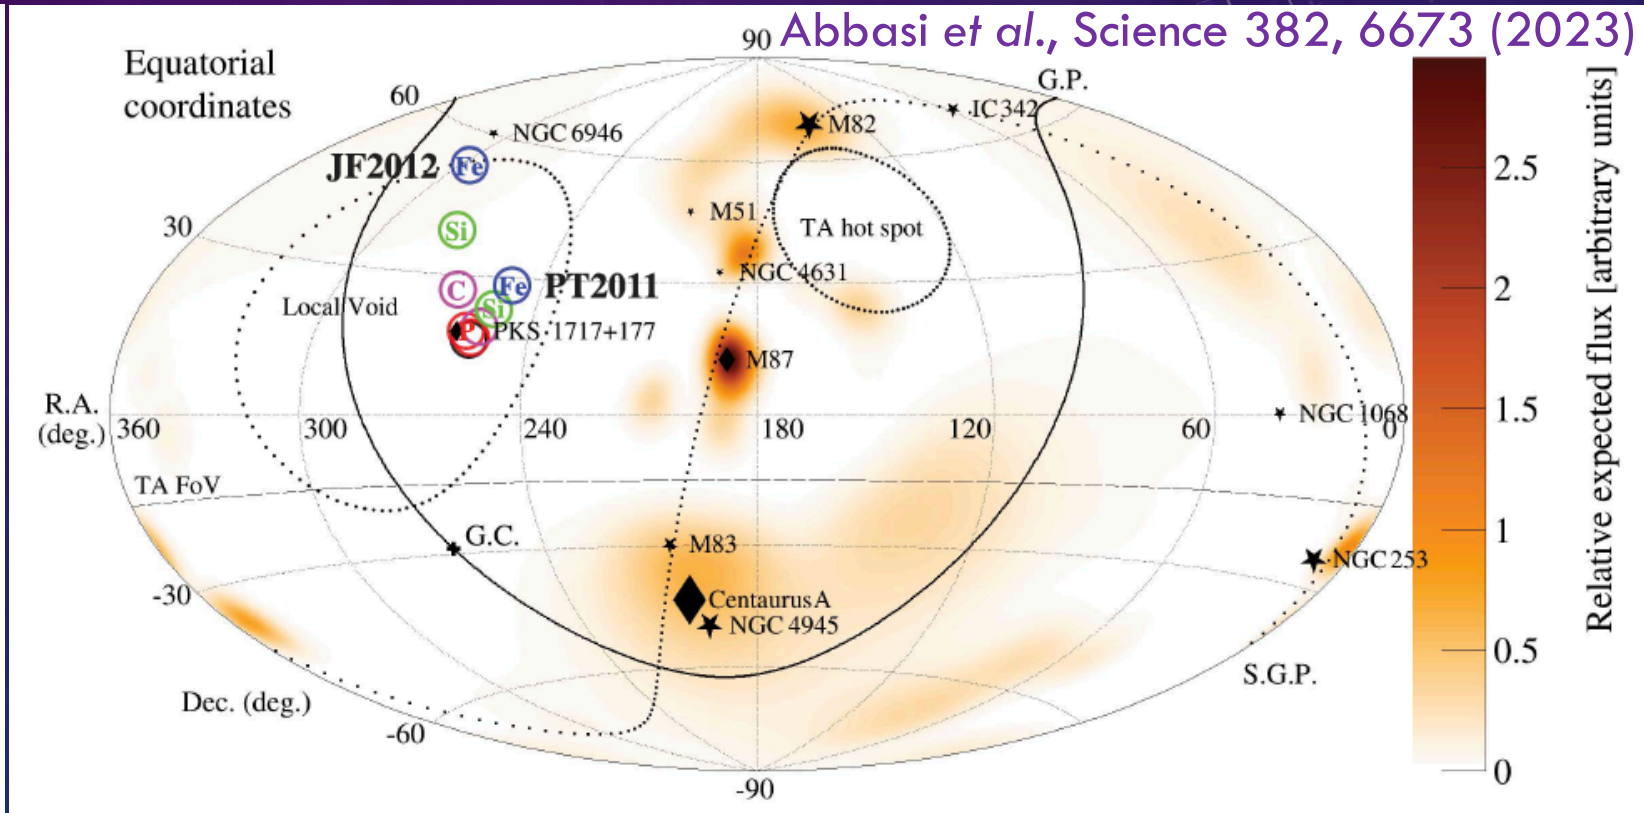

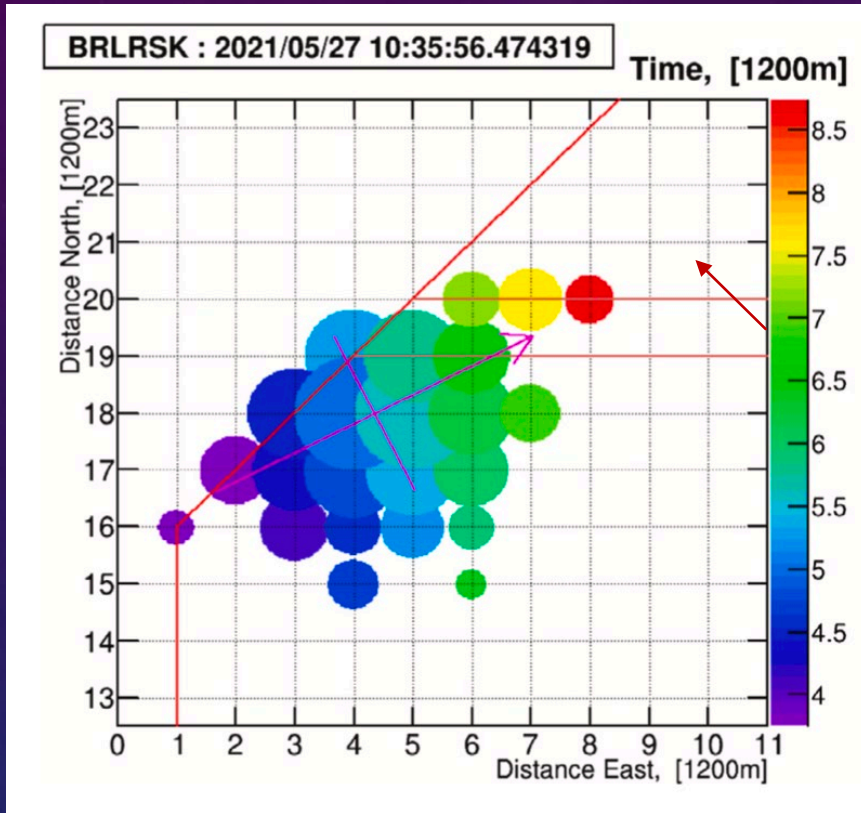

Auger full aperture spec

# FITTING BOTH SPECTRA, TA $-5^\circ \leq \delta < 24.8^\circ$ & EXCL. HOTSPOT + PPSC: $1.8\sigma$

# EXTREMELY ENERGETIC COSMIC RAY OBSERVED BY TA

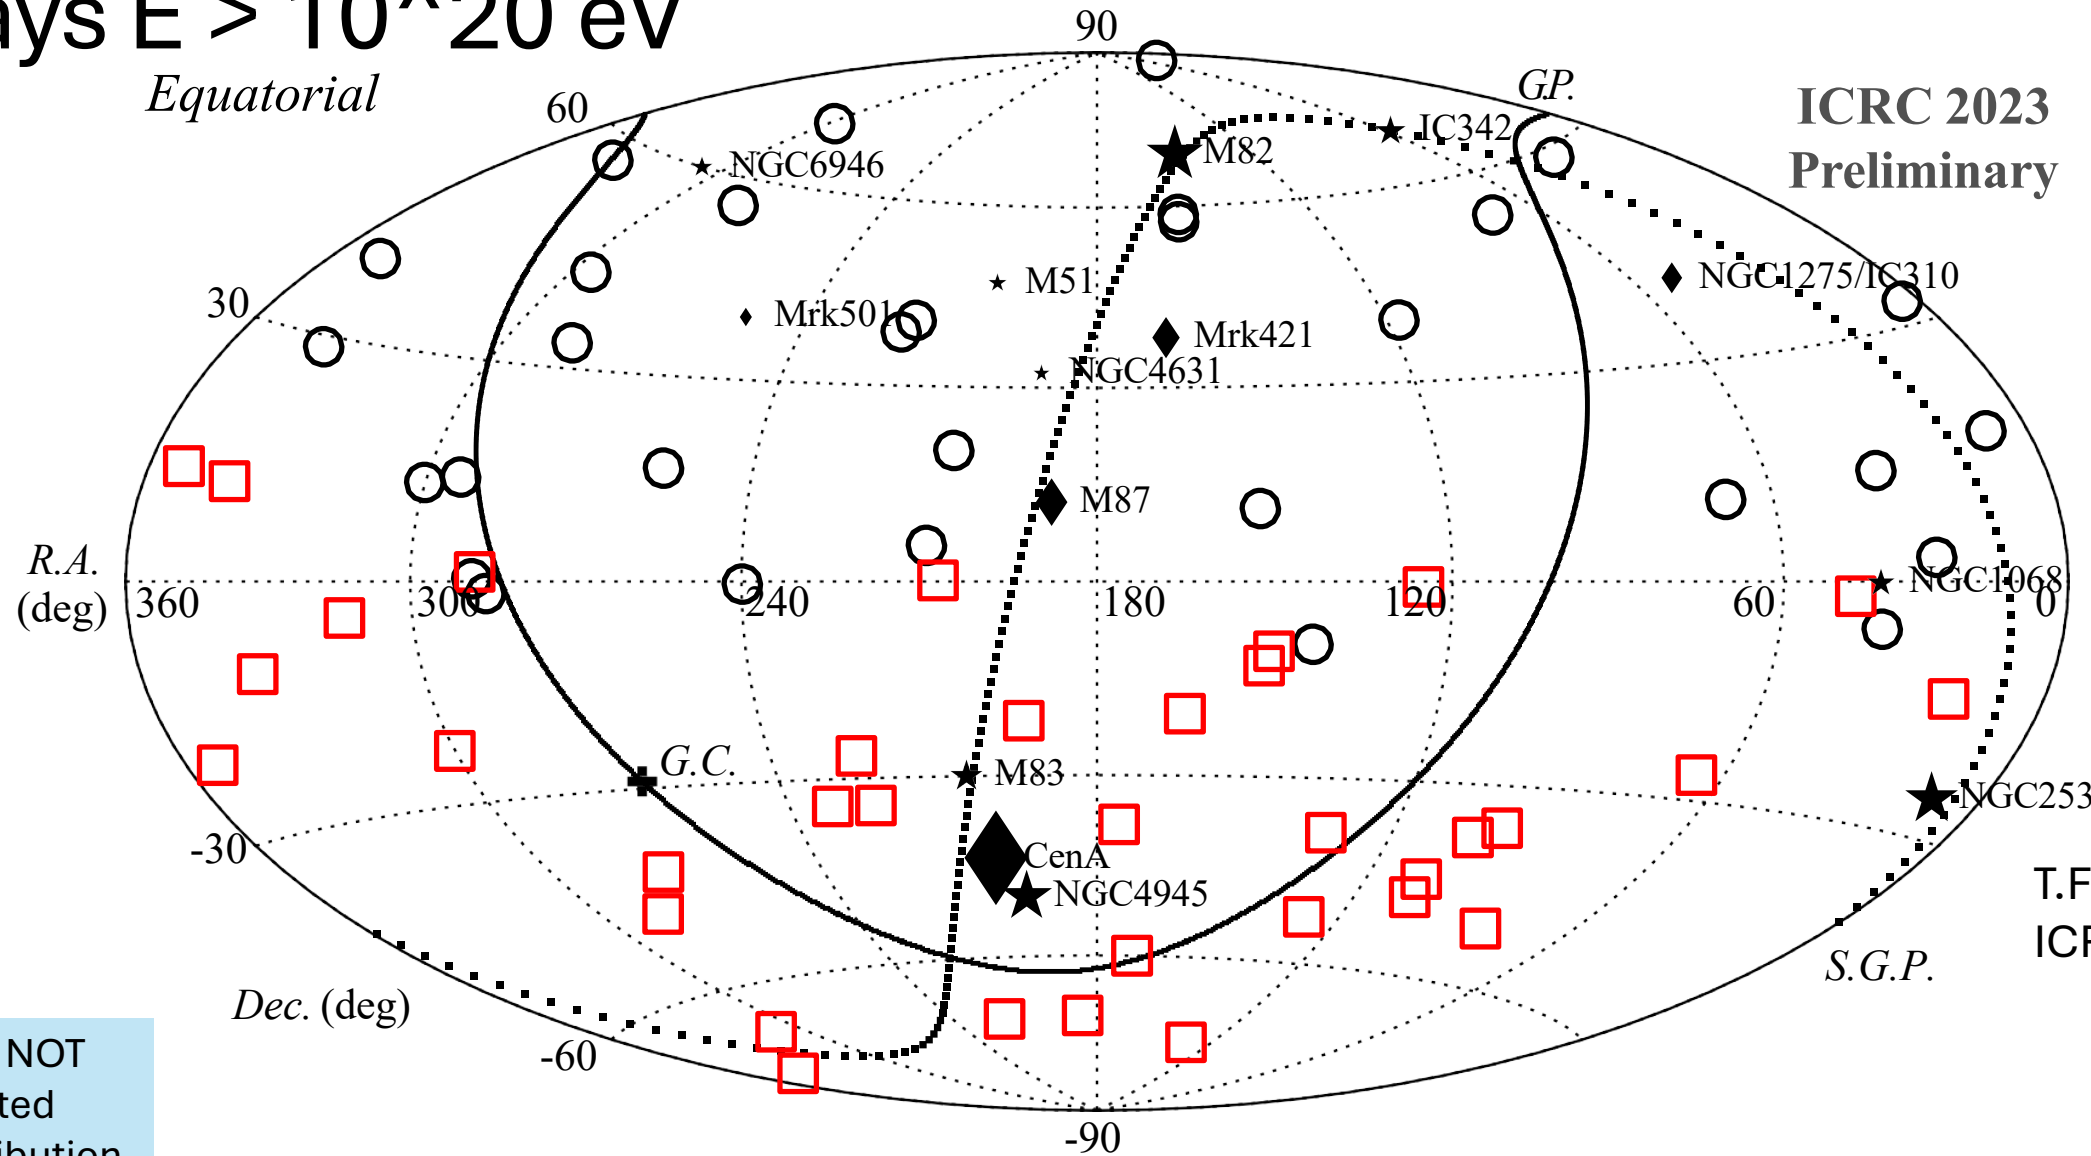

- 2021-05-27 10:35:56 UTC, No FD observation
- $E = 244 \pm 29$  EeV in the direction of  $(255.9^\circ, 16.1^\circ)$  in the equatorial coordinates

# Ultra-high energy cosmic rays $E > 10^{20}$ eV

No Obvious Sources

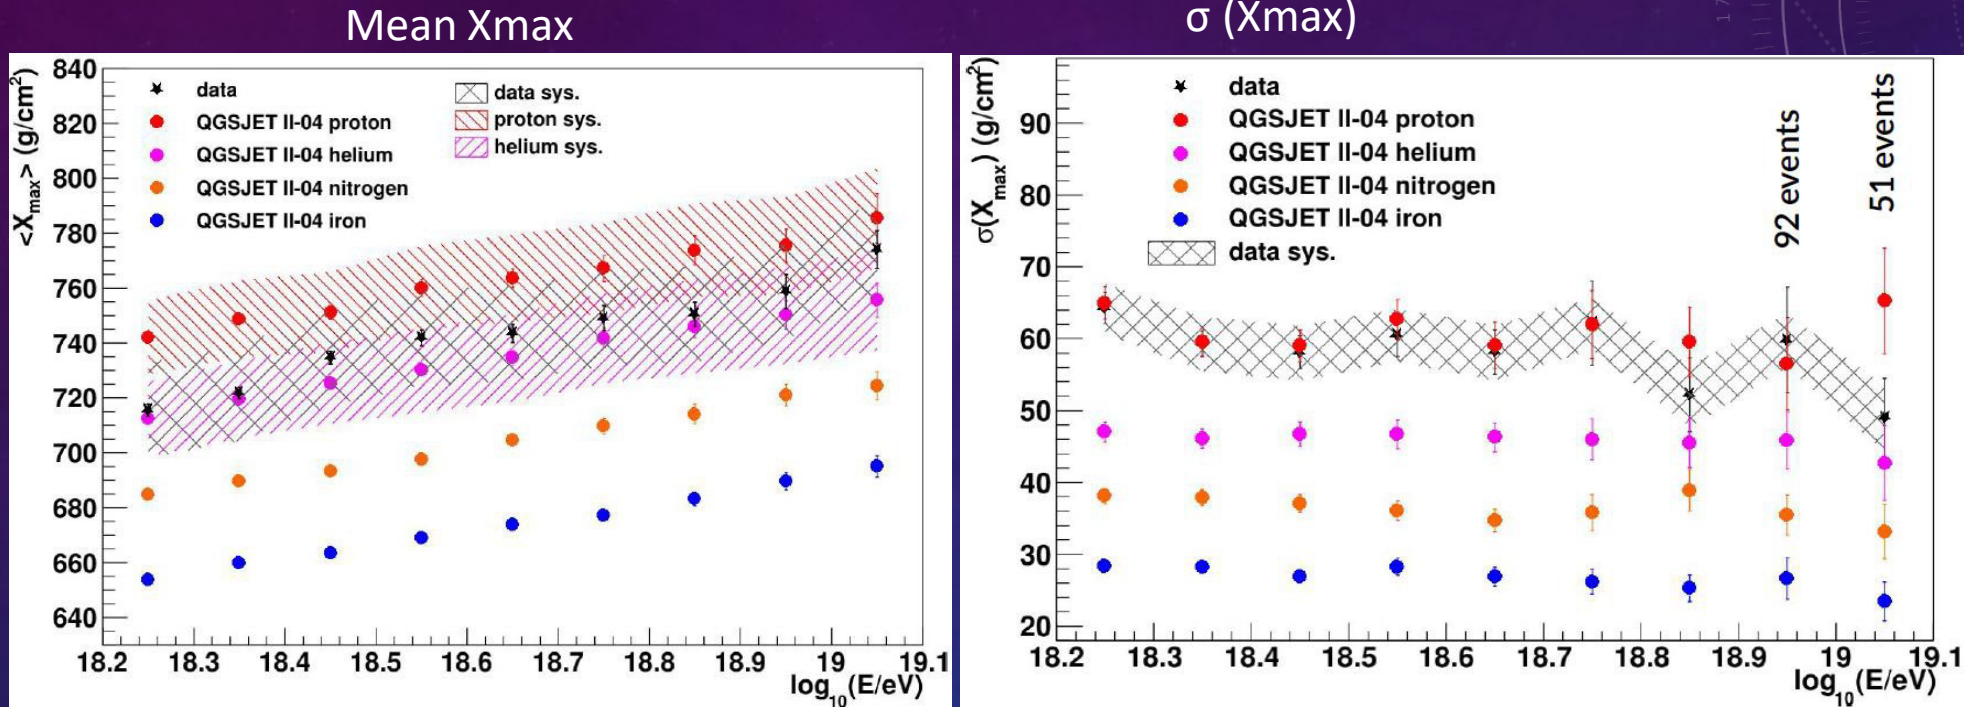

PIERRE AUGER OBSERVATORY

HE events do NOT seem correlated with the distribution of matter

TA 15-years (ICRC2023 Preliminary), Auger 17-years (ApJ 935 170 (2022))

# COMPOSITION ANALYSIS WITH TA HYBRID XMAX

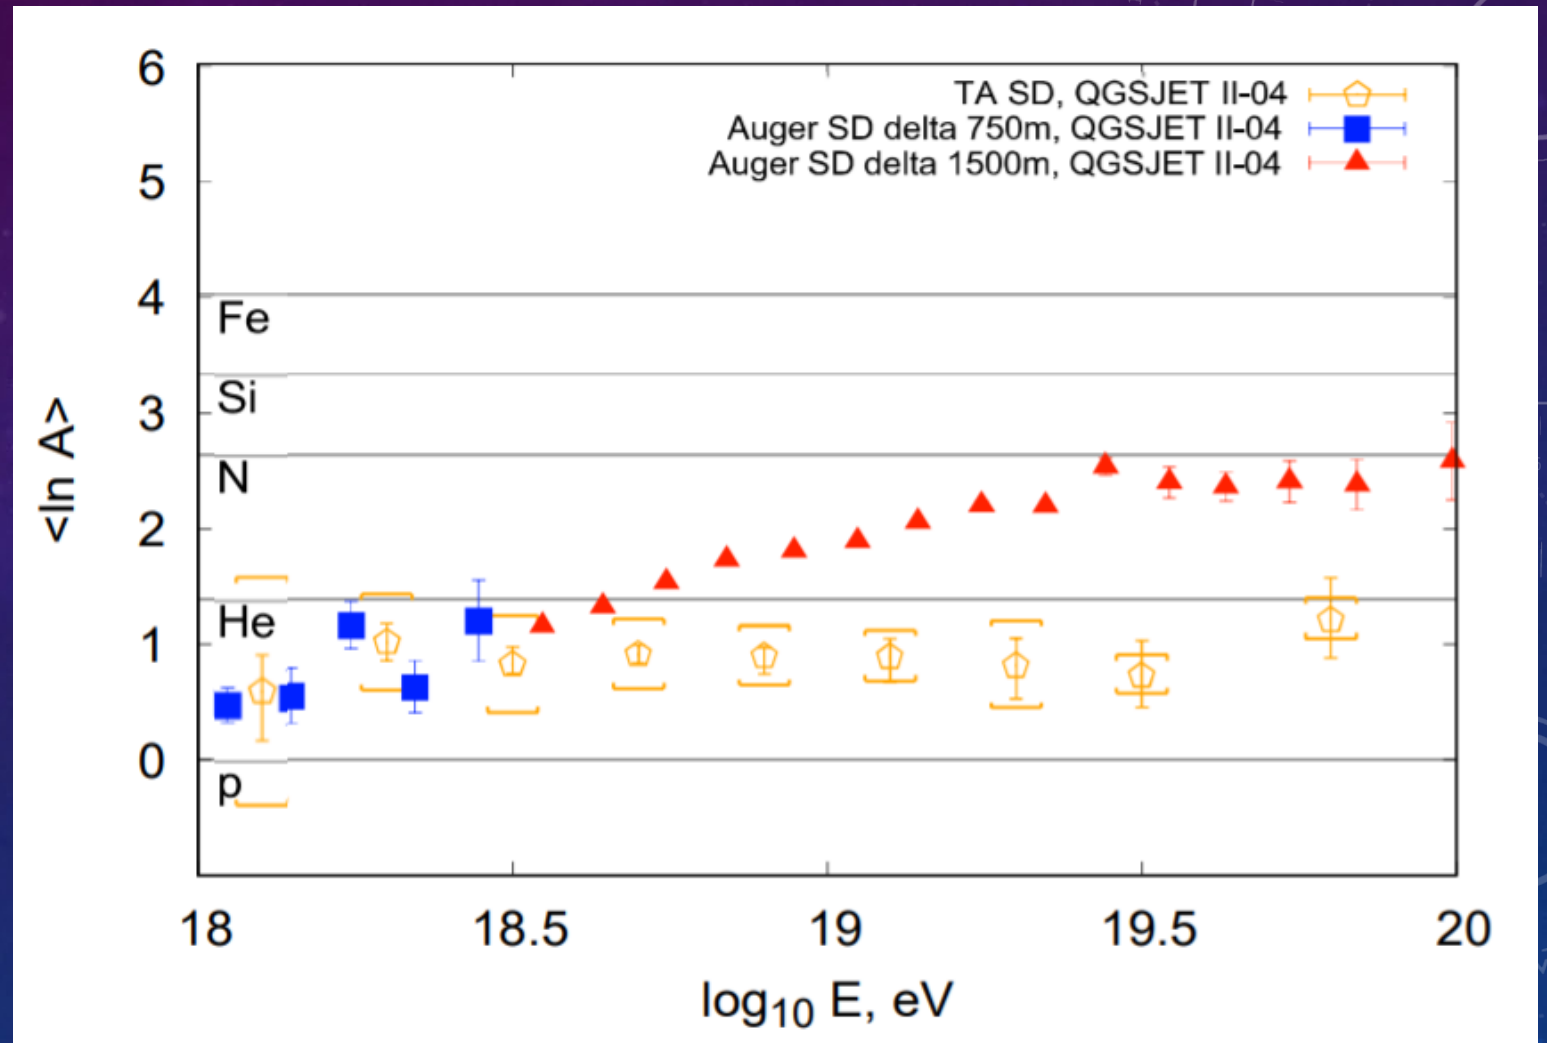

10 years SD and FD hybrid data  
 $\sigma$  (Xmax)

- Energy Range:  $10^{18.2}$  eV –  $10^{19.1}$  eV
- 3560 events after the quality cuts
- Systematic uncertainty of  $\langle X_{\max} \rangle$ :  $\pm 17$  g/cm<sup>2</sup>
- QGSjetII-04 interaction model was compared with the data  
→ agreement with light composition
- More events are needed to study highest energies
- Also working on more models

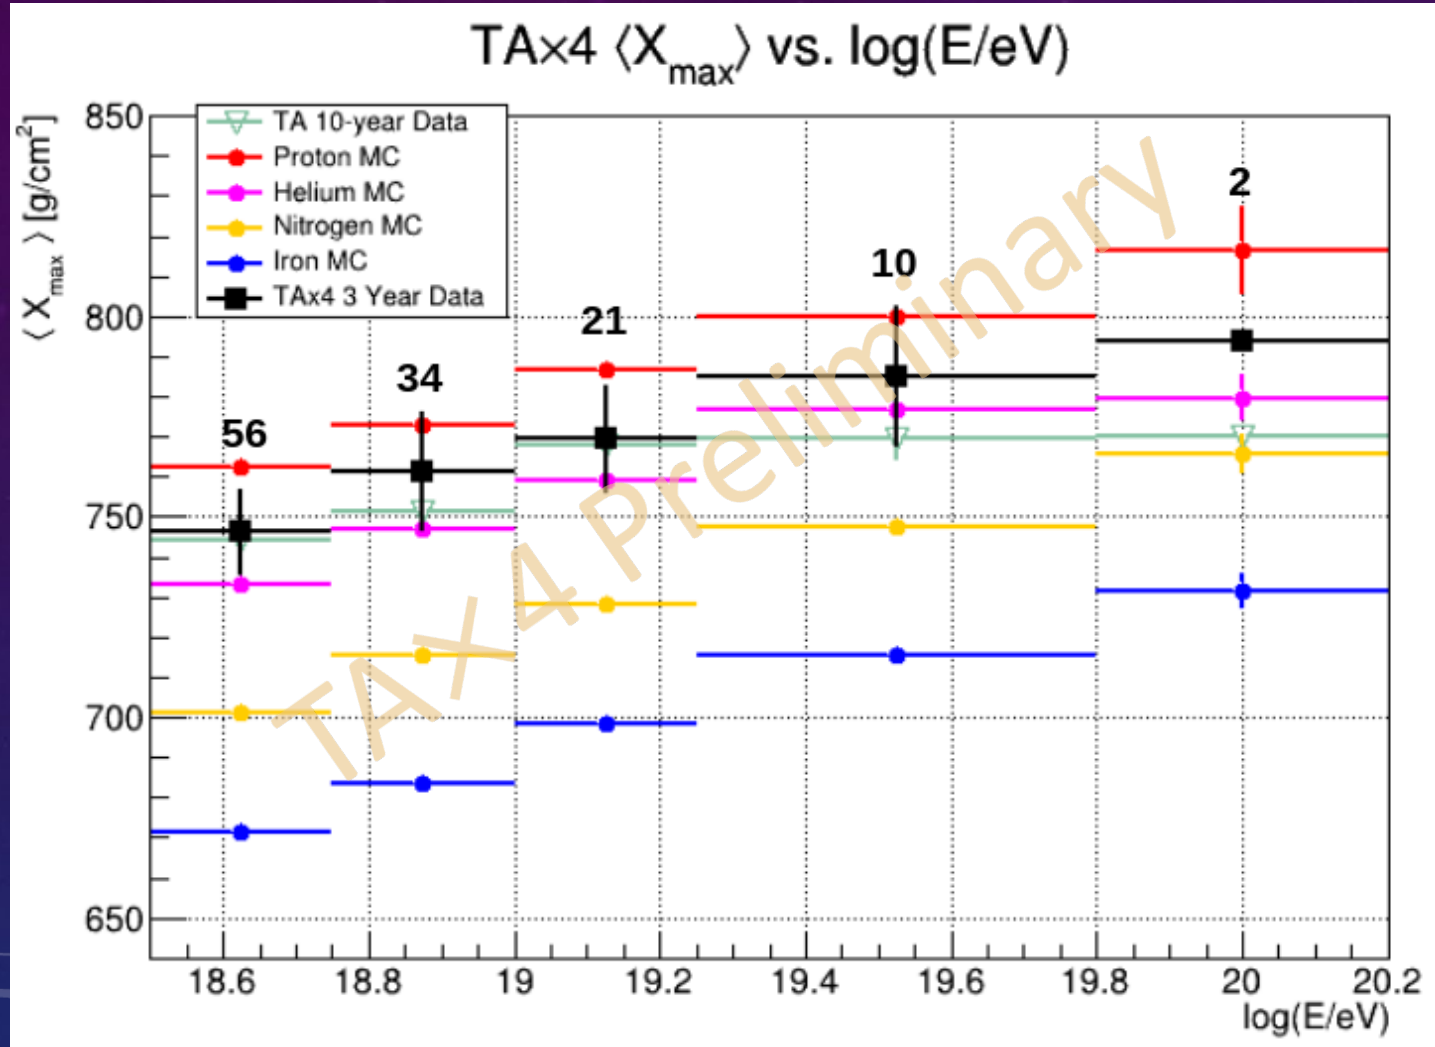

# COMPOSITION

- TA SD composition: BDT analysis using 16 composition sensitive signals (12 years: 2008–2020)
- Find light, unchanging composition above 1 EeV, with two different high-energy interaction models

# TAx4 HYBRID 3 YEARS OF DATA (NOVEMBER 2020–DECEMBER 2023)

Z. Gerber, APS April 2024

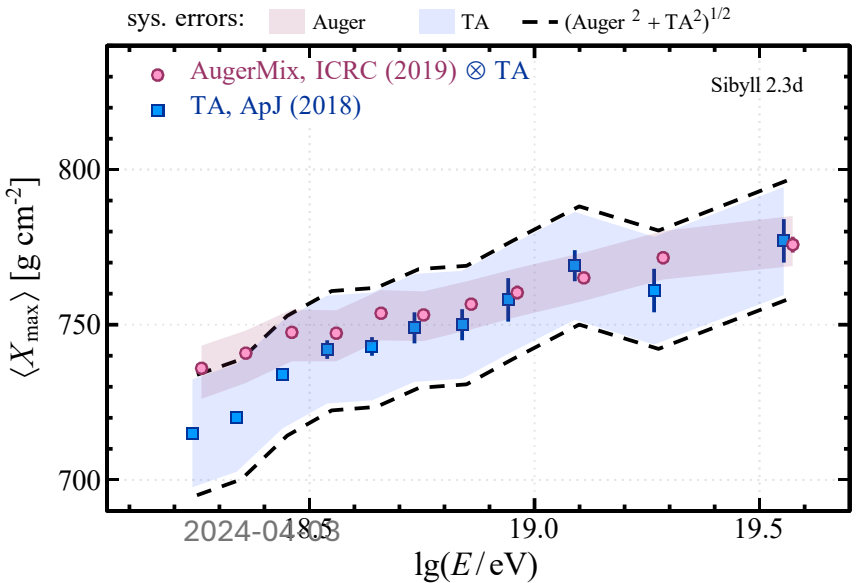

- $\langle X_{\max} \rangle$  values vs energy for  $\sim 3$  years data
- Compared to QGSJET II-04 Monte Carlo simulation distributions
- Point to a composition that is light and unchanging  $10^{18.6}$  to  $10^{20}$  eV
- Consistent with previous TA and HiRes results

# Auger-TA composition WG

A. Yushkov ICRC2023

Combine (p, He, N, Fe) of Sibyll 2.3d to fit Auger  $X_{max}$  distributions

Auger and Telescope Array measurements are compatible at the current level of statistics and understanding of systematics

# Telescope Array SD UHE Photon Search

- Neural network trained to classify protons and photons

Histogram of neural network prediction on Monte-Carlo and real data

Proton induced air showers

photon-likeness

photon-induced air showers

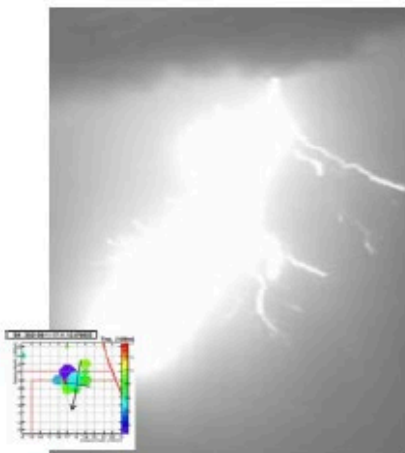

Estimation of the photon flux

Telescope Array and Auger have searched for photons and neutrinos in their data and observed neither – setting limits

# Observation and study of Terrestrial Gamma-Ray Flashes with Telescope Array SD

Rasha Abbasi, ICRC2023

# SUMMARY – RESULTS FROM TELESCOPE ARRAY

## Spectrum

- Spectrum measurements over >5 orders-of-magnitude in energy
- TA finds a significant difference in its own HE suppression **above and below 25° declination** (agreement with Auger in overlapping region)  $> 4\sigma$
- $> 8\sigma$  difference HE spectrum between TA and Auger in the full field of view
- Difference within common band can be reduced to  $1.8\sigma$  by cutting excesses and exposure edge

## Anisotropy

- Hotspot persists, but significance not increasing very quickly
- New significant excess at slightly lower energy in conjunction with the Perseus-Pisces Supercluster

## Composition

- Appears Light and Steady for  $E > 10^{18}$  eV
- But a Sibyll generated/reconstructed Auger mix similar in sky

## High Energy Event Observed

- High Energy event:  $2.4 \times 10^{20}$  eV
- Approaching Fly's Eye (1991 OMG) particle energy:  $3.2 \times 10^{20}$  eV
- Events  $> 10^{20}$  eV appear isotropic.....

## Future

- TA<sub>x4</sub> to Improve statistics especially for Anisotropy and Composition measurements
