Measurements of the Vector boson production with the ATLAS Detector

Tuesday 8 May 2018 17:00 (15 minutes)

Vector bosons are readily produced in the **pp** collisions at the **LHC**. Measurements of vector boson production cross sections is an important aspect of the **ATLAS** physics program and deviations of these measurements from the standard model predictions can be used to search for new physics. A selection of **Run 2** results with $\sqrt{s} = 13$ TeV data will be presented.

Summary

Author: WEBER, Stephen (Carleton University (CA))

Presenter: WEBER, Stephen (Carleton University (CA))

Session Classification: QCD & EW II
