PLENARY TALK 1 - Ofer Aharony

Monday 20 February 2017 09:30 (50 minutes)

Loops in AdS from conformal field theory

"Gauge/gravity duality is often used to compare classical results on the gravity side to leading large-N results in quantum field theory. At higher orders, perturbative loop corrections to the classical gravity results map to 1/Ncorrections to the field theory. We show how crossing symmetry constrains this mapping, and allows a direct conformal field theory computation of loop diagrams in anti-de Sitter space."
