

Lund group's activities in ALICE at LHC

Wednesday 25 November 2020 11:05 (15 minutes)

The ALICE experiment is currently undergoing a major detector upgrade during LS2 in order to make full use of the planned LHC luminosity increase for heavy-ion collisions from 2022. The Lund group has been active in the main ALICE tracking detector (TPC) from the start, and I wish to give an overview on the Lund group's activities both related to ALICE upgrades and physics analyses.

Abstract Track

LHC
