

## XII Latin American Symposium on High Energy Physics

Contribution ID: 41

Type: **Poster (Theory)**

# An overview on B anomalies

In this work we present a review of the anomalies generated by the transition  $b \rightarrow cl\nu$ , where  $l = e, \mu, \tau$ . Specifically anomalies  $R(D)$ ,  $R(D^*)$ ,  $R(J/\psi)$  are studied, including all possible four-Fermi operators in the effective Lagrangian that induce new physics to these ratios.
