

Double J/Psi production at LHCb

Wednesday 13 December 2017 18:05 (15 minutes)

The production cross-section of J/ψ pairs in the forward region is measured using a data sample of pp collisions collected by the LHCb experiment at a centre-of-mass energy of 13 TeV .

Differential cross-sections are presented as functions of several kinematic variables of the J/ψ pair are measured and compared to theoretical predictions.

Presenter: BELYAEV, Vanya (Institute for Theoretical and Experimental Physics (RU))

Session Classification: WG3: Double Parton Scatterings
