# The Migdal Effect in Semiconductors for the Effective Field Theory of Dark Matter Direct Detection

*Monday 13 May 2024 16:30 (15 minutes)*

We have further developed the dark matter (DM) Migdal effect within semiconductors beyond the standard spin independent interaction. Ten additional non-relativistic operators are examined which motivate five unique nuclear responses within the crystal. We derive the generalized effective DM-lattice Migdal Hamiltonian and present new limits for the full list of interactions.

## Mini Symposia (Invited Talks Only)

**Authors:** BERGHAUS, Kim (Stony Brook University); MCDUFFIE, Megan (Stony Brook University); Prof. ESSIG, Rouven (Stony Brook University)

**Presenter:** MCDUFFIE, Megan (Stony Brook University)

**Session Classification:** Dark Matter

**Track Classification:** Dark Matter
