## Higher-order Interference in a Generalization of Quantum Mechanics

Monday 13 May 2024 14:30 (15 minutes)

The talk will still be about the same generalization of QM but more focused on the difference in the interference pattern of two paths in canonical QM vs. this generalization of QM. The reason for this change is that I have made much more progress in this aspect than the topic of my current abstract. As such, I believe it would be more fruitful to talk about this work as opposed to higher-order interference, a work still in progress.

## Mini Symposia (Invited Talks Only)

Plenary (Invited talks only)

Authors: MINIC, Djordje (Virginia Tech); BHATTA, Nabin (Virginia Tech); TAKEUCHI, Tatsu (Virginia Tech)

Presenter: BHATTA, Nabin (Virginia Tech)

Session Classification: Neutrino Physics

Track Classification: Neutrino Physics
