## Curvature Perturbations Protected Against One Loop

*Thursday 16 May 2024 17:15 (15 minutes)*

I examine one-loop corrections from small-scale curvature perturbations to the superhorizon-limit ones in single-field inflation models, which have recently caused controversy. I consider the case where the Universe experiences transitions of slow-roll (SR)  $\rightarrow$  intermediate period  $\rightarrow$  SR. The intermediate period can be an ultra-slow-roll period or a resonant amplification period, either of which enhances small-scale curvature perturbations. I assume that the superhorizon curvature perturbations are conserved at least during each of the SR periods. Within this framework, I show that the superhorizon curvature perturbations during the first and the second SR periods coincide at one-loop level in the slow-roll limit.

### Mini Symposia (Invited Talks Only)

**Author:** INOMATA, Keisuke (Jonhs Hopkins University)

**Presenter:** INOMATA, Keisuke (Jonhs Hopkins University)

**Session Classification:** Cosmology & Dark Energy

**Track Classification:** Cosmology & Dark Energy
