Radiative correction to $B \rightarrow \ell \nu$

Monday 19 May 2025 16:45 (15 minutes)

In this talk I will focus on the study of the leptonic $B \rightarrow \ell \nu$ decay at next-to-leading order in QED. The future improvements of experimental measurements of this channel require a reliable theory prediction, hence a careful theoretical estimate of QED corrections. The multi-scale character of this process requires an appropriate effective theory (EFT) construction to factorize the different contributions. In the first part of this talk, I will discuss the EFT description of the process at the partonic level, which is based on Heavy Quark Effective Theory and Soft Collinear Effective Theory. I will show how the inclusion of QED corrections demands a generalisation of the hadronic decay constant defining a new non-perturbative input. In the second part of the talk, I will discuss the EFT description below the confinement scale based on the Chiral Lagrangian including Heavy Mesons (B and B^*). I will show that depending on the cut on final state radiation and on the lepton flavor the contribution from excited states of the B meson can become important.

Mini Symposia (Invited Talks Only)

Plenary (Invited talks only)

Authors: Dr CORNELLA, Claudia (CERN); Dr KÖNIG, Matthias (JGU (Mainz)); NEUBERT, Matthias; FERRÉ, Max (PRISMA Cluster of Excellence \& Mainz Institute for Theoretical Physics\\ Johannes Gutenberg University,)

Presenter: FERRÉ, Max (PRISMA Cluster of Excellence \& Mainz Institute for Theoretical Physics\\ Johannes Gutenberg University,)

Session Classification: Flavor

Track Classification: Quark and Lepton Flavor Physics
