Recent diboson measurements in ATLAS

Tuesday 20 May 2025 14:15 (15 minutes)

This talk reports recent precision measurements of diboson production and the study of anomalous Gauge boson self couplings (and constraints on EFT wilson coefficients) in ATLAS. These results offer further insights into the structure of electroweak interactions and provide greater sensitivity to new physics effects with improved measurement precision.

Mini Symposia (Invited Talks Only)

Plenary (Invited talks only)

Author: MYERS, Greg (University of Michigan (US))

Presenter: MYERS, Greg (University of Michigan (US))

Session Classification: Electroweak

Track Classification: Electroweak, Higgs, and Top Quark Physics
