Signature of a sterile neutrino in Flavor Anomalies

I will consider the signature of a light sterile neutrino to resolve certain flavor anomalies. First I will consider the recent evidence for $B \rightarrow K$ invisible by Belle II and describe a framework to explain the measurement and also to explain the MiniBooNE anomaly. I will then discuss how a sterile neutrino signatures can be explored in experiments like Belle II and FASER

Mini Symposia (Invited Talks Only)

Plenary (Invited talks only)
