

2009-2016

UNIVERSIDAD TECNICA  
FEDERICO SANTA MARIA

Centro Científico  
Tecnológico  
de Valparaíso

Jan 6th, 2016

*Ex umbra in solem*

# CCTVal

Particle Physics, Computer Science and Electronics.

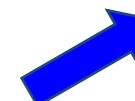

**Theoretical physics**

**Experimental physics**

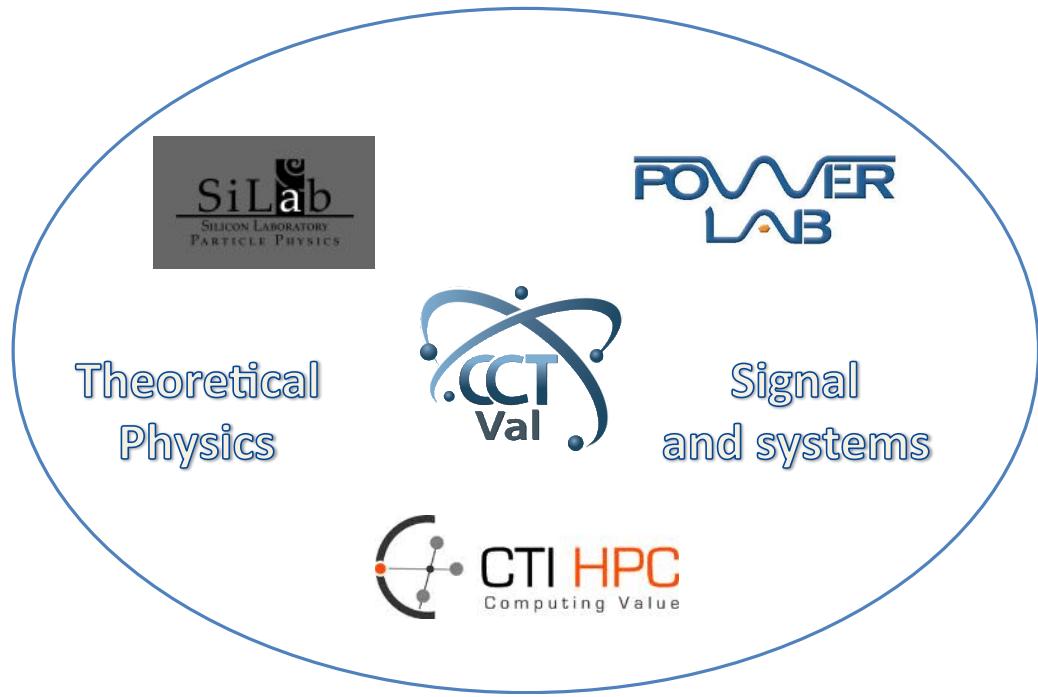

**Engineering / Technology / Industry**

**Society**

# Who we are

The Center is composed by 5 main groups

- 12 Senior researchers (7 Chilean, 1 US , 4 Russian)
- 14 Young researchers (10 Chilean, 3 Russian and 1 Armenian)
- 18 Postdocs (11 Chilean, 2 US , 1 Russian, 1 Chinese, 1 Iranian,1 Venezuelan, 1 Moroccan)
- 3 Project managers (Engineers)
- 2 Technicians + 4 Administration

# Research Activities

**1 Particle detector  
technology,  
advanced sensors**

**2 Experimental particle  
physics**

**3 Particle physics  
theory and  
phenomenology**

**4 Neutrino  
physics**

**5 High performance  
computing**

**6 Power electronics,  
modeling, control  
and signal processing**

# Achievements (2009-2016)

- Researchers 31 ( 35%)
- Postdoctoral Fellows 18 ( 65% non Chilean)
- ISI PUBLICATIONS 541
- Citations 14.701 (Jan 2014)
- Students > 100 (average)
- 
- Theses ( under-post graduated) 185  
*(Physics, Electronics, informatics, Mechanics, Industrial)*
- Participation in SC conferences 302
- Scientific visit ( Labs/ Universities in the world) 122
- Patents ( presented) 5
- Contracts with industry/labs 10
- External funding awarded 10 M USD
- Equipment 1.2 M USD

# International collaborations

ATLAS participation

Higgs physics  
Heavy ions (convenor: W. Brooks)

CERN COMPLETES TRANSITION TO LEAD-ION RUNNING AT THE LHC

Jueves, 11 de Noviembre de 2010 00:00 |

ALICE experiment.  
Actualizado (Viernes, 10 de Diciembre de 2010 12:55)

Student training

Ph.D. Electronics Thesis  
Grid computing Thesis

CERN grid connection  
TIER 2 Level

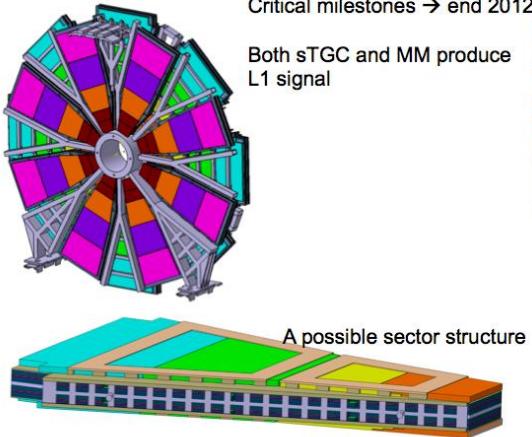

51 % of grid resources in LatinAmerica

# ATLAS Muon System Upgrade

## The ATLAS muon system upgrade

The baseline technology, defined in May, is a combination of sTGC (super TGC) and Micromegas

Particle  
detector  
technology

CONICYT Y CERN FIRMAN ACUERDO PARA LA CONSTRUCCIÓN EN CHILE DE PIEZA CLAVE EN LA RENOVACIÓN DEL EXPERIMENTO ATLAS

Publicado 11-06-2014

Con el apoyo de CONICYT además se financiará la incorporación como miembro pleno de la Universidad de Talca al experimento ALICE.

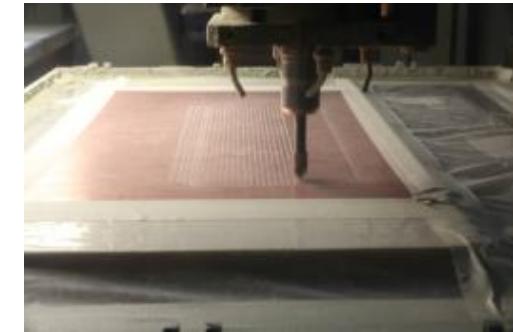

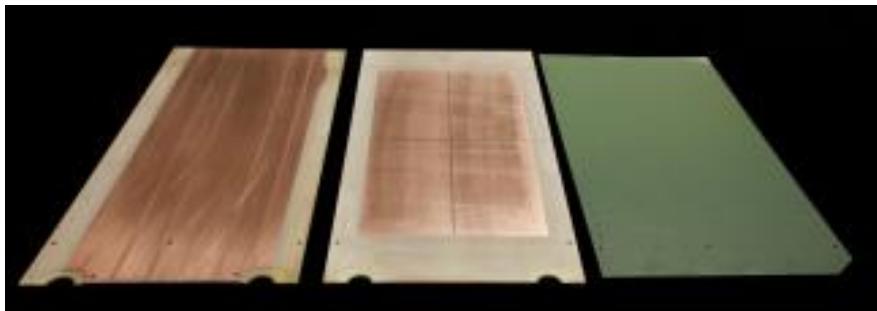

CONICYT y la Organización Europea de Investigación Nuclear [CERN](#) firmaron la semana pasada un Memorandum de Entendimiento (MoU) para la construcción de la Pequeña Rueda de Muones (Muon New Small Wheel Project) por parte de científicos de la [Pontificia Universidad Católica](#) y del Centro Científico Tecnológico de Valparaíso ([CCVal](#)) de la Universidad Técnica Federico Santa María, como parte del proceso de renovación de [ATLAS](#) el detector de partículas más grande del mundo.

CONICYT financiará con más de 200 millones de pesos el equipamiento necesario para la construcción de parte de la Pequeña Rueda de Muones, proyecto considerado clave en la renovación del experimento ATLAS que busca incrementar la eficiencia en la detección de partículas.

- USM production site (15% of new ATLAS muon spectrometer):
- A clean room with 2 granite tables and a crane
- Graphite spray machines: PRIMA and KUKA robot
- 2 m long winding machine and electrical test set up
- Cosmic ray test facilities in UTFSM and PUC (Santiago)

**Group from Electronics Department participates in programming of KUKA robot and PRIMA machine setup**

# Atlas Upgrade

# International collaborations

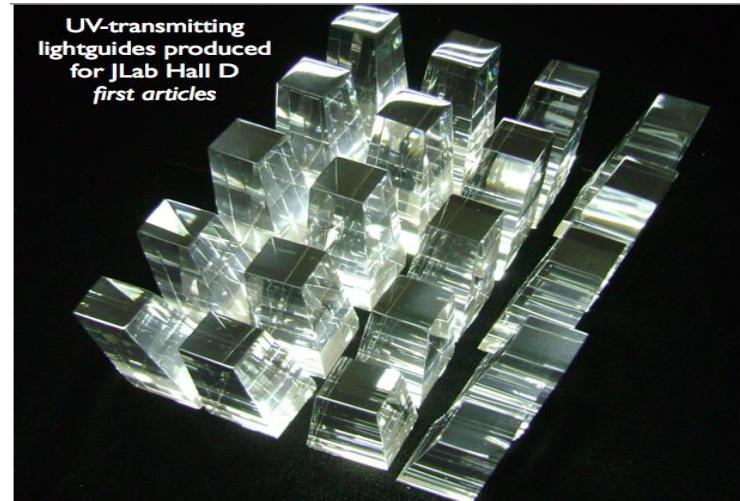

**CLAS:** Strong interactions  
Student visits

**GlueX:** polarized photons

Fabrication of 4000 UV-transmitting lightguides, 10 different irregular trapezoidal geometries

**\$2 million contract budget**

Complete characterization of 2800 16-cell MPPC/SiPMs for JLab Hall D

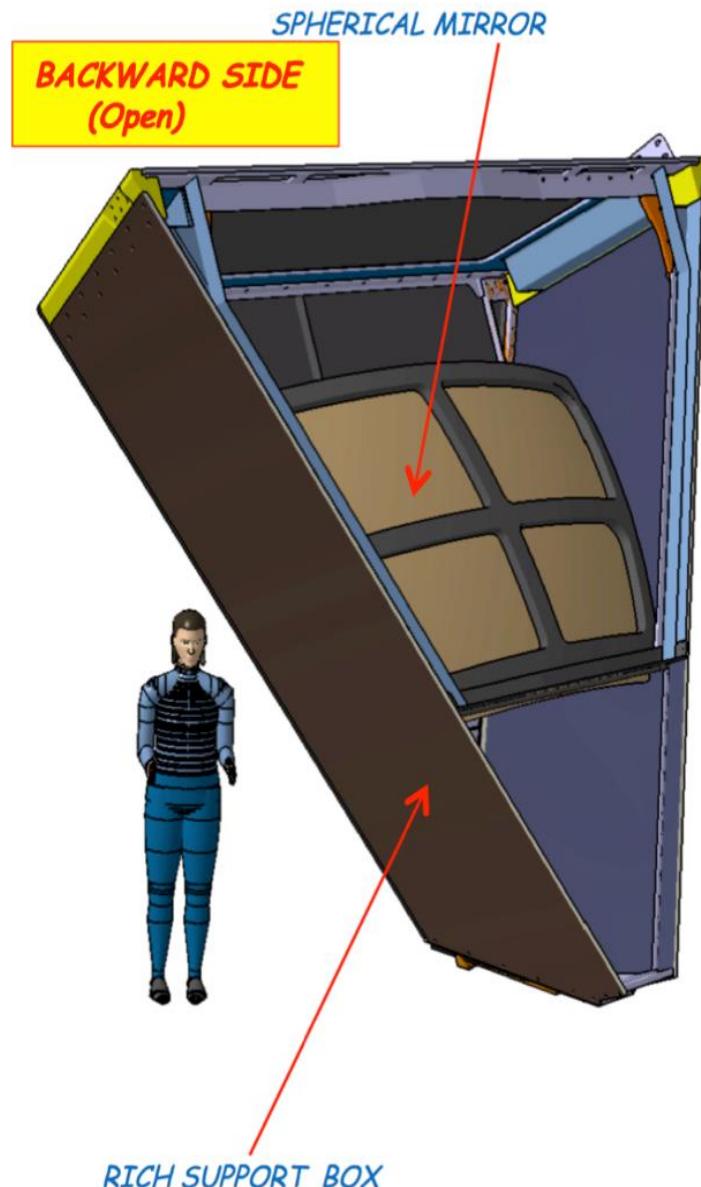

# CLAS12 RICH Mirrors

Crucial detector for CLAS12 particle identification; needed for experiment [E12-06-117](#); three USM spokespersons

USM will make front-surface *ultralight* mirrors using carbon fiber reinforced polymer (CRFP) layup on a polished steel mandrel

Technology applicable to solar energy, space science, microwave applications

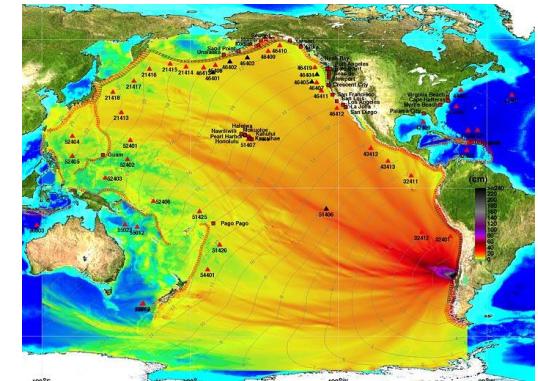

## High performance computing

## Advanced tsunami warning

Chilean and US Navy, Boston Univ.

Computing,  
electronics,....

## Biomedical image processing

Hyperspectral imaging  
PET

## Computational astrophysics

Redshift determination  
Molecular astrophysics

## Big data and machine learning

## Scientific computing

# ANDES deep underground Lab

Neutrino physics

- Projected deep underground Laboratory: ANDES
- Inside road tunnel under the Andes Mountains
- First U-Lab on the Southern Hemisphere
- World's 3rd deepest (1750 m under rock)
- International Latin American laboratory
- Our group has the coordination in Chile

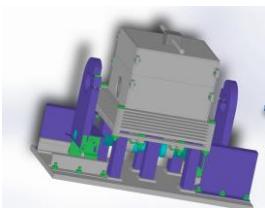

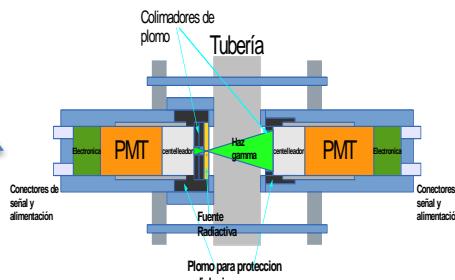

# Applied Research

# Applied Research Projects

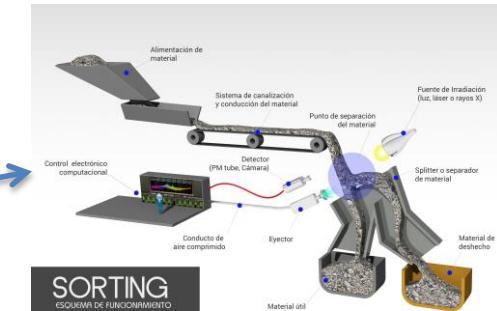

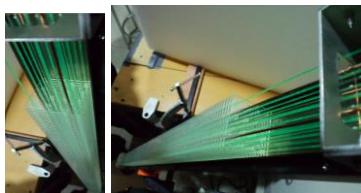

Copper Detector

Nuclear Densimeter

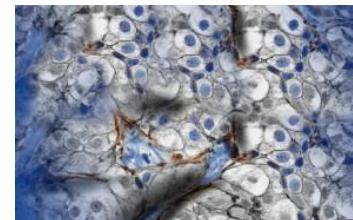

Radon Detector

Mining copper Sorting Equipment

wireless probe for use in radio guided surgery

Medical Image solution

2012

2013

2014

# Applied Research Projects

Chiliboard

Low cost PC-board ,

internet Cloud Platform for Industrial Equipment's ( case for Mining – Energy)

quitz

Mobile payment Latam platform

Automation solutions for Mining and Agriculture

micro sleep and a high level of fatigue ( mining truck workers)
