muon $g-2$ and the B-physics anomalies in RPV supersymmetry and the discovery prospect at LHC

Saturday 2 April 2022 09:20 (20 minutes)

In R-parity violating supersymmetric scenario, assuming the third-generation superpartners to be the lightest (calling the scenario RPV3), we show that there are some benchmark scenarios in which $R_{D^{(*)}}$, $R_{K^{(*)}}$ and $(g-2)$ anomalies can be addressed and also can be detected at 14 TeV LHC or future hadron colliders.
