

# The Possible Upper Bounds on the Sparticle Masses

*Friday 17 May 2019 17:40 (25 minutes)*

We discuss the upper bounds on the sparticles masses. In the split supersymmetry, we consider such bounds from the Higgs boson mass and electroweak vacuum stability. And in the universal high-scale supersymmetry, we consider such bounds from Higgs boson mass, gauge couple unification, and proton decay, etc.

## Preferred Session

Phenomenology

## Comments
