

Measurements of Higgs boson properties with the ATLAS detector

Thursday 12 January 2023 15:10 (20 minutes)

This talk presents precise measurement of the properties of the Higgs boson, including its mass, total width, spin, couplings and CP quantum number. The measurements are performed in various Higgs boson production and decay modes, as well as their combinations. Observation of deviations between these measurements and Standard Model (SM) predictions would be a sign of possible new phenomena beyond the SM

Presenter: OCARIZ, José (LPNHE Université Paris Cité CNRS/IN2P3)

Session Classification: Parallel Session G
