

Does SUSY Like Rabi?

Thursday 20 October 2022 14:00 (30 minutes)

Professor Mohapatra is rightly celebrated as one of the originators and strongest proponents of ‘Left-Right Symmetric Models’ which predict massive neutrinos. There are SUSY extensions of such constructions. However, there also exists SUSY extensions that are intrinsically not left-right symmetric even if the spectrum of the propagating particles respect the symmetry. We discuss the distinction this make in constructing higher order operators in beyond the standard model constructions.

Presenter: GATES, Jim (University of Maryland)
