ν_τ -Ar interactions in GENIE

- Found a pre-calculated spline for ν_τ -Ar interactions, with energy up to 999 GeV
 - Will use this spline for now, as the placeholder to develop the interface in Geant4 application to read GENIE results
- As pointed out by Felix, there is a new dedicated interaction model for high energy neutrino interactions in GENIE called HEDIS (high energy DIS): <https://arxiv.org/abs/2106.09381>
 - It's available in the GENIE repository (master branch), but not a released version of GENIE
 - Consider to move to the newer version of GENIE in the future, need more understanding on the simulation results
