Transport in neutron stars

Thursday 27 September 2018 10:50 (30 minutes)

I will give a review of transport properties of matter inside neutron stars and point out their significance for astrophysical observables. This will include various phases of the star, from the outer layers to the densest possible phases, such as deconfined quark matter. I will try to focus on general methods and principles, but also touch on specific open questions for future research.

Presenter: SCHMITT, Andreas (University of Southampton)
