# Bethe-Salpeter equation with spin dof

*Thursday 12 September 2019 09:50 (50 minutes)*

A survey of the challenges in solving the ladder Bethe-Salpeter equation with spin dof, within an approach able to be played directly in Minkowski space, is presented. The interesting features of the light-front distributions for both two-fermion and fermion-scalar bound systems are discussed in view of possible correlations with the underlying dynamical interaction.
