

Zerilli equation within a modified theory of General Relativity

Thursday 13 September 2018 11:50 (20 minutes)

For a modified theory of General Relativity, the pseudo-complex version, the stability of the Schwarzschild solution is investigated. The extended Zerilli equation is derived and the scattering of gravitational waves investigated, which are the solutions of the Zerilli equation. Consequences for the ring-down frequency, after the fusion of two black holes, are studied.
