Review of Latest Advances on Dark Matter

Tuesday 6 September 2022 09:40 (20 minutes)

The review will cover the latest advances in understanding dark matter. At the beginning it will follow my review on dark matter published in 2021 in the Elsevier journal “New Astronomy Reviews”(v. 93, 101632) and my review published in 2021 by Nova Science Publishers as a chapter in the book “Advances in Dark Matter Research”. Then the current review will cover the newest results published after the above two reviews had been printed.
