

# CEMP Stars as Probes of First-Star Nucleosynthesis, the IMF, and Galactic Assembly

Contribution ID: 68

Type: **Invited presentation**

## The Galactic bulge and old stellar populations

*Friday 13 September 2019 10:20 (30 minutes)*

We present observations and theoretical models regarding the formation of the Galactic bulge. Our main interest concerns the blue horizontal branch and moderately metal-poor globular clusters, that might be among the oldest objects in the Galaxy. We also present abundances, in particular of heavy elements, that could provide evidence for early s-process nucleosynthesis in early rotating massive stars.
