

- MAGA = Make Accelerators Great Again
- FCC or nothing? Not just repeat the same thing in larger scale.
- Plan B: muon collider in LHC tunnel, LHeC (DIS community), CLIC, LHC fixed target...
- FCC-ee & CEPC competition & complementary (e.g. W mass measurement) good (not rely on China, political/security issue with China, SCC vs LHC, continuity & training for Europe, CERN existing infrastructure)
- Selling argument: "Exciting for once not to know what you will find"?
Tachyons? See-saw neutrinos? Higgs self-couplings? Dark matter?
- Finland should engage in CEPC with small effort if realized
- Binding to FCC-ee might harm effort/funding of "advantageous" techniques
